

## SEAL WITH STAINLESS STEEL WIRE

**Code: RO.C-02**

### **Domain of use:**

The product is recommended for security assurance of electricity meters, water meters, gas meters oil pumps or other counters and for sealing of chambers, cupboards and containers.

The seal prevents unauthorized access and offers visible proofs of this unauthorized access.

### **Characteristics:**

The RO.C-02 seal is a non-deforming device, designed for prevents unauthorized access. Its shape assures its inviolability. The seal has a transparent body, a central pivot and a multi-core stainless steel wire. The useful length of stainless steel wire "Lu" has to be calculate with following relation:

$$Lu = Lb + 15 \text{ cm,}$$

where Lb is the length of the safety loop of wire.

The central pivot can be performed in various colors (white, red, blue, green, yellow, and black). Authorized personnel without special tools can quickly install this seal. After the sealing, the rotating petal of the pivot will be detached. The seal is designed for single usage; its components aren't toxic and are recyclable. Its inscription, obtained through thermal stamp, gives an additional safety feature. Its inscription can be stamped in two rows, first row for client's name (max. 8 letters) and second row for series (max. 8 digits). The stainless steel cable (0,7 mm) allows the usage of the seal even in narrow spaces. The unsealing is made by cutting the stainless steel wire.
